

Pfect-A

EXOMEDI

HUMSC Derived Exosome

A revolutionary skin renewal solution designed to enhance cellular repair and regeneration. Infused with potent exosomes, it boosts collagen, accelerates healing, and restores skin vitality for a smoother, more youthful complexion. Experience the future of skin rejuvenation.

EXOMEDI

HUMSC Derived Exosome

HUMAN UMBILICAL MESENCHYMAL STEM CELL (HUMSC) DERIVED EXOSOMES - INTRADERMAL TREATMENT

Rich in growth factors, cytokines, and microRNAs that accelerate skin regeneration, repair at a cellular level and enhances fibroblast activity.

CELLULAR COMMUNICATION & TISSUE REGENERATION

- Facilitates intercellular communication to promote faster wound healing and reduce inflammation.
- Encourages tissue remodeling, reducing scars, pigmentation, and fine lines.

DEEP HYDRATION & BARRIER REPAIR

- Strengthens the skin barrier, reducing transepidermal water loss (TEWL) and maintaining long-term hydration.
- Improves skin resilience against environmental aggressors.
